Hi

The purpose of this message is to give you heads up that we will be working with FMC to develop and implement a one time sitewide phosphine monitoring event to document current conditions regarding phosphine in near surface soil gas and in ambient air around a sub-set of the CERCLA RUs and the RCRA ponds. The RCRA pond monitoring will also include measurements from all TMPs. We are going to need a quick turn around review on this plan (i.e. 1 week). I will let you know when to expect the draft work plan after I have a better idea of when we will receive it from FMC. Kira
