

**PH3 CHECKS AROUND TMP'S ON RCRA PONDS
at FMC**

PH3 measured using hand-held electrochemical sensors
(0.00 to 20.0 ppm and 0.0 to 1000 ppm)

PH3 readings are an "eyeball" average as the monitor was moved along
the outside perimeter of a TMP enclosure at existing openings and
around the seam of the removable top or within a TMP enclosure.

NOTE: Readings are not intended to be interpreted as having 3 or 4
significant figures. Excel formatting of the readings implies more than
actual significant figures.
